

ESG: Environmental, Social, and Governance

Global companies are increasingly under scrutiny for the positions they take on a range of issues under the ESG umbrella, including climate change, environmental protection, sustainability, social responsibility, human rights, DEI, and many other social and governance issues. Governments around the world are taking divergent approaches to ESG, and the risk landscape has complexified through regulations, and intensified enforcement actions, litigation by NGOs and private plaintiffs and pressure from investors and customers.

A Multidisciplinary Approach

Our global and multi-disciplinary team has deep experience in environmental, human rights and culture risk issues, compliance monitorships, reviews of corporate governance and policies, both internal and government investigations, including investigations by multiple global regulatory agencies, US Congressional testimony and inquiries, UK public inquiries and parliamentary hearings, formal investigations by individual Attorneys General, inquiries from multistate groups of Attorneys General, and threats by State Treasurers.

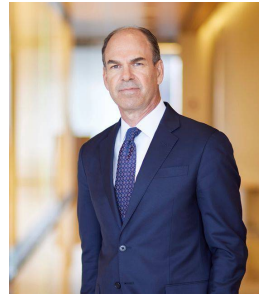

We stand ready to help our clients develop cohesive, coordinated, and strategic approaches to ESG – both to identify, assess, mitigate, and prevent adverse human rights or climate impacts, and implement or reinforce a comprehensive compliance strategy that balances different international risks. For clients involved in transactions, we provide due diligence on whether potential acquisitions may carry ESG compliance risk.
